

## TEDIA\_DAQ01 version 2.84 Properties

- Windows 98 to Windows 8 support
- Support for 32-bit applications only (can run on both 32-bit and 64-bit systems)
- Configuration data stored in the Windows registry
- Support for global/local configuration option fully functional up to Windows XP (in Windows Vista and above, global configuration option is not shared among users; dotNET framework applications cannot use global configuration option at all)

## TEDIA\_DAQ01 version 3.10 Properties

- Windows XP to Windows 8 support (previous versions of Windows has not been tested)
- Support for 32-bit applications only (can run on both 32-bit and 64-bit systems)
- Support for 64-bit applications only (can run on 64-bit systems only)
- Configuration data stored in dedicated files
- Support for global/local configuration option

## Device support overview

Implementation of support for new devices in version 2.8x was completed in early 2013 and others will not be added.
